

## **IN THE CLAIMS**

For the Examiner's convenience, all pending claims are presented below.

Please amend claims as follows:

1.-24. (Cancelled)

25. (Previously Presented) A method, used in a computer system that includes a user input device coupled to a processor, a display and a memory, for viewing at least one of a plurality of documents, including a document selected as a current document displayed in a first display area of the display, the method comprising:

(a) in response to a first signal from the user input device corresponding to movement of a pointer in the first display area, displaying in a second display area of the display a representation of content of another document associated by a link to the current document, without selecting the other document as the current document and displaying the other document in the first display area of the display;

(b) in response to a second signal from the user input device distinguishing from the first signal, selecting the other document as the current document;

(c) displaying the other document as the current document in the first display area of the display; and

(d) repeatedly performing steps (a), (b), and (c), re-using the first and second display areas of the display, to present different documents in the plurality of documents to a user.

26. (Original) The method of claim 25 wherein said representation of content is a thumb nail image of the document.

27. (Original) The method of claim 26 wherein said thumb nail image further includes highlighting of concepts of interest to the user contained within the document.

28. (Original) The method of claim 25 wherein said plurality of documents in a non-directed arrangement comprises pages of the World Wide Web.

29. (Original) The method of claim 25 wherein said plurality of documents includes Hyper Text Markup Language (HTML) documents.

30. (Original) The method of claim 25 wherein said plurality of documents includes documents produced by a word processing program.

31. (Original) The method of claim 25 wherein said plurality of links comprises at least one Uniform Resource Locator (URL).

32. (Previously Presented) A computer program product, used in a computer system that includes a user input device coupled to a processor, a display and a memory, for viewing at least one of a plurality of documents, including a document selected as a current document displayed in a first display area of the display, said computer program product comprising:

(a) code for displaying in a second display area of the display a representation of content of another document associated by a link to the current document in response to a first signal from the user input device corresponding to movement of a pointer in the first display area, without selecting the other document as the current document and displaying the other document in the first display area of the display;

(b) code for selecting the other document as the current document in response to a second signal from the user input device distinguishable from the first signal;

(c) code for displaying the other document as the current document in the first display area of the display; and

(d) code for repeatedly performing steps (a), (b), and (c), re-using the first and second display areas of the display, to present different documents in the plurality of documents to a user; and

a computer readable storage medium for holding said codes.

33. (Original) The computer program product of claim 32 wherein said representation of content is a thumb nail image of the document.

34. (Original) The computer program product of claim 33 wherein said thumb nail image further includes highlighting of concepts of interest to the user contained within the document.

35. (Original) The computer program product of claim 32 wherein said plurality of documents in a non-directed arrangement comprises pages of the World Wide Web.

36. (Original) The computer program product of claim 32 wherein said plurality of documents includes Hyper Text Markup Language (HTML) documents.

37. (Original) The computer program product of claim 32 wherein said plurality of documents includes documents produced by a word processing program.

38. (Original) The computer program product of claim 32 wherein said plurality of links comprises at least one Uniform Resource Locator (URL).

39. (Previously Presented) An apparatus for viewing at least one of a plurality of documents in a non-directed arrangement comprising:

a memory;

a user input device;

a display adapted to display a document selected as a current document in a first display area; and

a processor operatively disposed to:

(a) in response to a first signal from the user input device corresponding to movement of a pointer in the first display area, displaying in a second display area of the display a representation of content of another document associated by a link to the current document, without selecting the other document as the current document and displaying

the other document in the first display area of the display;

(b) in response to a second signal from the user input device distinguishing from the first signal, selecting the other document as the current document;

(c) displaying the other document as the current document in the first display area of the display; and

(d) repeatedly performing steps (a), (b), and (c), re-using the first and second display areas of the display, to present different documents in the plurality of documents to a user.

40. (Original) The apparatus of claim 39 wherein said representation of content is a thumb nail image of the document.

41. (Original) The apparatus of claim 40 wherein said thumb nail image further includes highlighting of concepts of interest to the user contained within the document.

42. (Original) The apparatus of claim 39 wherein said plurality of documents in a non-directed arrangement comprises pages of the World Wide Web.

43. (Original) The apparatus of claim 39 wherein said plurality of documents includes Hyper Text Markup Language (HTML) documents.

44. (Original) The apparatus of claim 39 wherein said plurality of documents includes documents produced by a word processing program.

45. (Original) The apparatus of claim 39 wherein said plurality of links comprises at least one Uniform Resource Locator (URL).

46. (Currently Amended) A method comprising:

- moving a pointer in a first display area of a display displaying a current document;
- displaying in a second display area of the display, in response to the pointer movement in the first display area, content associated with ~~a~~<sup>in</sup> the current document, without selecting the content as the current document and displaying the content in the first display area of the display;
- moving the pointer over a portion of the content;
- making a selection while the pointer is over the portion of the content; and
- replacing the current document with a representation of another document as the current document in the first display area of the display in response to the selection.
